

Marta Domingo

Barcelona · hello@marta.fyi · LinkedIn · marta.fyi

I'm a hands-on design lead who enjoys moving between shaping product direction, working through complex interaction problems and helping teams do their best work. At Miro, I lead design for core collaboration experiences used by more than 100 million people, staying close to the work from early framing through detailed experience decisions. Previously at HP, I designed and led work across early-stage innovation, product experiences, platforms and design systems. I care about thoughtful strategy, strong craft and creating an environment where people can grow and make confident decisions.

Core skills

Product design · Interaction design
· Prototyping · AI-enabled
experiences · Design systems ·
Growth · Experimentation ·
Platform design

Lecturer at

ELISAVA — Master's Programme
Director, Strategic Design and
Innovation
2023–2025

BAU — Lecturer, Master's in
Experience Design
2021–2025

Massana School of Art and
Design — Academic Adviser
2021

IED — Lecturer, Master's in
Interaction Design
2020

ELISAVA — Lecturer,
Undergraduate Degree in Design
2016–2021

Background

MPhil, Contemporary Philosophy
Universitat Oberta de Catalunya ·
2023–2026

MBA, Business Administration
EAE Business School · 2020–2022

MA, Advanced Studies in Art
History
University of Barcelona · 2015–2016

Bachelor's Degree, Product
Design
ELISAVA · 2011–2015

Experience Design Programme
KAOSPILOT · 2019

Experience

Miro — Design Manager

2025–Present

- Lead design for core collaboration experiences used by more than 100 million people.
- Stay close to the product work, partnering with designers and product teams to frame problems, explore directions and refine key interactions.
- Explore how AI can support the design process and create more useful product experiences.
- Shape design quality through critique, detailed feedback and clear experience standards.
- Create frameworks and ways of working that help teams make strong, independent design decisions.
- Support design leads and individual contributors while continuing to contribute to product direction and craft.
- Work closely with Product, Engineering and senior leadership to connect strategic priorities with the experience delivered to users.

HP — Design Lab Lead

2024–2025

- Led the Design Lab while contributing directly to the exploration and development of early product ideas.
- Worked with multidisciplinary teams to frame opportunities, create concepts and explore new markets and customer needs.
- Used prototypes and experiments to turn early customer signals into clearer product directions.
- Translated research and design exploration into evidence that supported go/no-go investment decisions.
- Made discovery cycles faster and more focused by helping teams test the most important assumptions early.
- Connected hands-on exploration with product strategy, ensuring that decisions remained grounded in real customer needs.

HP — Product Design Lead

2021–2023

- Led the move towards design at scale while remaining closely involved in the design system's foundations, patterns and product application.
- Worked directly with design teams to evolve the system, contributing to an approximately 40% increase in component reuse.
- Designed shared standards for quality, consistency and usability, reducing design-system update cycles by approximately 25%.
- Partnered with designers and engineers to turn recurring product needs into reusable components and practical guidance.
- Defined ways to measure adoption and understand where the system was—or was not—helping teams.
- Combined systems thinking with detailed product work to help teams design and ship with greater speed and confidence.

HP — Senior Product Designer

2019–2021

- Combined hands-on product design with leadership across multiple product lines and platform initiatives.
- Led a team of four designers while continuing to shape concepts, interaction patterns and key product decisions.
- Worked through complex product problems with Design, Product and Engineering from early framing to delivery.
- Reduced late-stage rework by bringing disciplines together earlier and making design ownership clearer.
- Helped unify more than ten applications used by approximately 36,000 companies.
- Designed shared platform principles, patterns and frameworks that created a more consistent experience across products.

HP — Product Designer

2017–2019

- Explored and designed early product concepts, helping teams learn before committing to development.
- Created prototypes and tested key assumptions to reduce uncertainty around new opportunities.
- Planned and ran user experiments that shaped longer-term product strategy.
- Used insights from both successful and discontinued concepts to guide future product decisions.
- Helped establish an experimentation-first approach focused on making, testing and learning quickly.
- Worked closely with Product, Engineering and Research to turn customer needs into tangible product ideas.
