

Marta Domingo

Barcelona · hello@marta.fyi · [LinkedIn](#) · marta.fyi

I'm a hands-on designer with more than 10 years of experience building products, who enjoys moving between shaping product direction, working through complex interaction problems and helping teams do their best work. At Miro, I lead design for Growth on a product used by more than 100 million people, staying close to the work from early framing through detailed experience decisions. Previously at HP, I designed and led work across early-stage innovation, product experiences, platforms and design systems. I care about thoughtful strategy, strong craft and creating an environment where people can grow and make confident decisions.

Core skills

Product design · Interaction design · Prototyping · AI-enabled experiences · Design systems · Growth · Experimentation · Platform design

Lecturer at

ELISAVA — Master's Programme Director, Strategic Design and Innovation
2023–2025

BAU — Lecturer, Master's in Experience Design
2021–2025

Massana School of Art and Design — Academic Adviser
2021

IED — Lecturer, Master's in Interaction Design
2020

ELISAVA — Lecturer, Undergraduate Degree in Design
2016–2021

Background

MPhil, Contemporary Philosophy
Universitat Oberta de Catalunya · 2023–Present

MBA, Business Administration
EAE Business School · 2020–2022

MA, Advanced Studies in Art History
University of Barcelona · 2015–2016

Bachelor's Degree, Product Design
ELISAVA · 2011–2015

Experience Design Programme
KAOSPILOT · 2019

Experience

Miro — Head of Design, Growth

2026–Present

- Lead design for Growth at Miro: the path people take from first touch through activation, conversion and expansion, on a product used by more than 100 million people.
- Run design as an experimentation practice—hypotheses, prototypes and live tests rather than opinion—and design AI-enabled experiences into those journeys.
- Grow the team and the bar it works to, keeping Product, Engineering and senior leadership aligned so growth targets and experience quality move together.

Miro — Design Manager, Core Experiences

2025–2026

- Led design for the core collaboration experiences at the centre of Miro, from early framing through detailed interaction decisions.
- Took AI from exploration into shipped product experiences, and into how the design team itself works.
- Raised the quality bar through critique, clear experience standards and frameworks that let designers make strong, independent decisions.

HP — Design Lab Lead

2024–2025

- Led the Design Lab, HP's early-stage innovation team, exploring new markets and customer needs ahead of the roadmap.
- Used prototypes and experiments as the unit of argument, turning weak early signals into directions teams could commit to.
- Produced the evidence behind go/no-go investment decisions, and made discovery cycles faster by testing the riskiest assumptions first.

HP — Product Design Lead

2021–2023

- Led the move to design at scale while staying close to the design system's foundations, patterns and product application.
- Paired systems thinking with detailed product work, defining shared standards for quality, consistency and usability.
- Contributed to an approximately 40% increase in component reuse and approximately 25% shorter update cycles, with adoption measured rather than assumed.

HP — Senior Product Designer

2019–2021

- Combined hands-on product design with leadership of four designers across multiple product lines and platform initiatives.
- Worked complex product problems with Design, Product and Engineering from early framing through to delivery.
- Helped unify more than ten applications used by approximately 36,000 companies, and cut late-stage rework by making design ownership clear.

HP — Product Designer

2017–2019

- Explored and designed early product concepts, helping teams learn before committing to development.
- Built prototypes and ran user experiments to reduce uncertainty around new opportunities.
- Shaped longer-term product strategy from what shipped and what was discontinued, and helped establish an experimentation-first way of working.
